Project Title _____ House Rental Management System _____

Start Date _____ March 4, 2026 _____ Completion Date _____ June 15, 2026 _____

Place _____ Shenyang Aerospace University _____

Design Tasks and Requirements:

Design Tasks:

A house rental management system aims to meet the needs of multi-role collaborative management of the house rental process, realizing the digitization and automation of rental business. Design and implement a house rental management system that has following functions.

- 1) User information: Login and logout the system, changing password, updating private information. Users in system basically includes tenant, real estates agent, and administrative users.
- 2) Logging record: Be able to record who log in this system at when.
- 3) Real estates agent manages the housing resource, creates and modifies the housing information (including layout, area, facilities, rent, and etc.),

uploads housing photos, and updates the housing status (to let, rented, under maintenance). Real estates agent can be created, modified and disabled by administrative users.

4) Tenant can filter housing by region, price, area, layout, and etc. Tenant can view the detailed housing information and photos. Tenant can submit rental requests, track the progress of application approval, and communicate with agents on line. Tenant can view and download electronic contracts, check rent payment. Tenant can be created, modified and disabled by administrative users.

5) Transaction information should reflect which house be rented by whom at when. Transaction information can be searched by date, transaction number, housing, tenant or real estate agent. To apply exploratory data analysis to raw transaction information, an analytics dashboard should be developed to provide meaningful data visualization for decision making.

Design Requirements:

- 1) The system should be designed and implemented with B/S model. MySQL database is strongly recommended.
- 2) The system should be able to check the data validity when user enters information.
- 3) Write the thesis correctly in accordance with thesis template.
